

General Description

The CESI pre-engineered security electronic cabinets (SEC) are a fully functional and stand alone security electronic system designed to provide the control over locking, fire, lights and fans, inmate telephones, intercoms and PAs, CCTV, and TSDS systems in correctional and detention facilities.

CESI engineers will work closely with the customer to design a system that meets their specifications. All documents and drawings of the SEC will be given to CESI technicians, who will assemble and wire up the SEC with close attention to workmanship and detail.

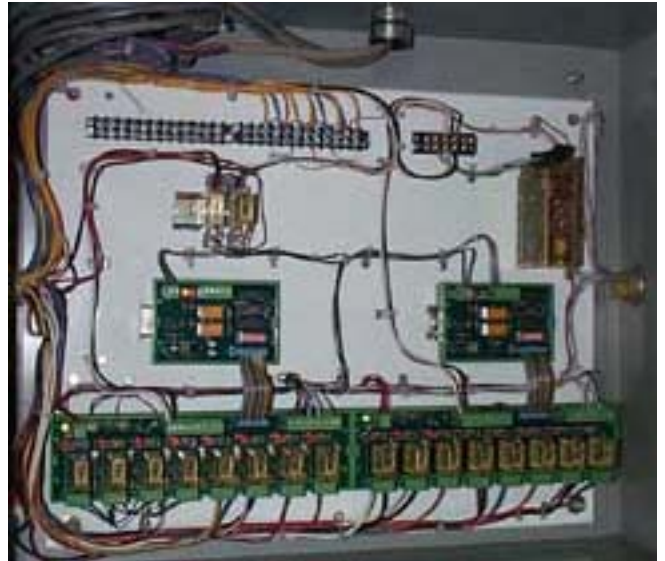

The CESI SECs are built using CESI series of products to perform all functions needed in a correctional environment. The SECs can also be built using customer specified hardwired or processor based parts.

All relays and wires in the SEC are identified and labeled. All parts, terminal blocks, and other components will be labeled as well.

All CESI SECs are fully tested before delivery. Full documentation and installation diagrams will be provided to the customer.

Features

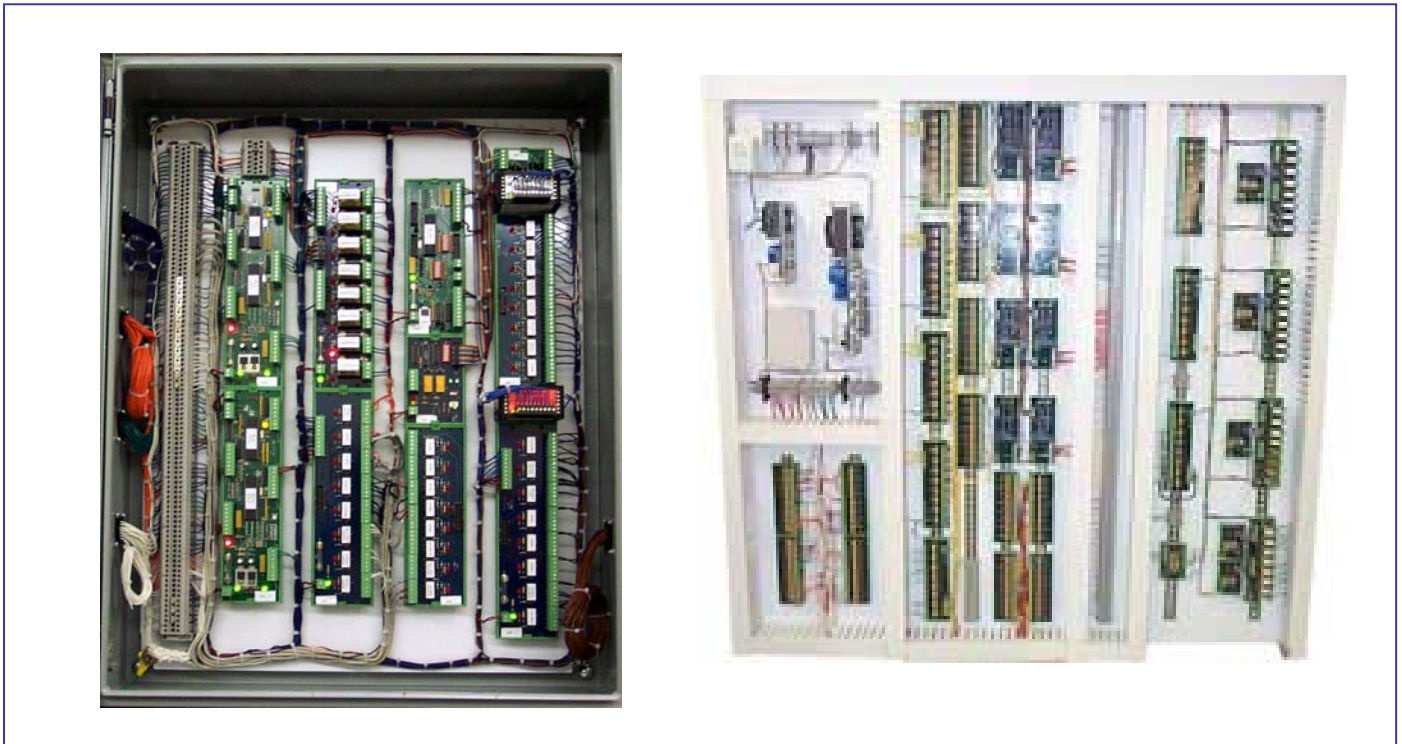

- Pre-engineered by CESI electrical engineers to meet the customer's specification
- Custom made by experienced technicians with excellent craftsmanship
- Full documentation and detailed wiring diagrams are provided
- Fully tested
- Built in UL listed enclosures that are available in stainless steel and weatherproof versions
- Identification and labels for all wires and relays
- Removable electronics mounting panel to allow easy installation of the enclosure
- SEC comes in various sizes and types, including wall mounts and floor mounts
